Nothing to Fear

An Interactive Fiction by Peter Mahhov

Release 1 / Serial number 210923 / Inform 7 build 6M62 (I6/v6.33 lib 6/12N)

This story offers a sidebar that shows some useful commands. Would you like to see the sidebar? (Y/N)>

8. If you have never played parser-based interactive fiction games before, type **Y** (for yes) to enable the common commands sidebar.

9. Type your commands after the **>** in the center of the screen

Most commands are entered in the form of [verb] [noun]. Feel free to experiment, the sidebar is not an exhaustive list.

10. Use the command **about** for help and credits

In the *about* screen, go up and down the menu with the arrow keys, and select with ENTER.

You can quit the *about* screen and go back to the game by pressing **q**.

11. Once you are finished with the game, you can examine the source code to find any alternative text, secrets, or achievements you might have missed. The Inform 7 language is very human-readable and can be understood with little to no coding experience.
